

A scatter plot titled "Received PAM Symbols" showing the distribution of received symbols in the complex plane. The horizontal axis is labeled "Real Component" and ranges from -1.0 to 1.0 with major ticks every 0.5 units. The vertical axis is labeled "Imaginary Component" and ranges from -0.5 to 0.5 with major ticks every 0.5 units. The plot area has a light gray grid. Two distinct clusters of red circular markers are visible, both lying on the real axis (Imaginary Component = 0). One cluster is centered at approximately -1.0, and the other is centered at approximately 1.0. Each cluster consists of about 10-12 points, showing a slight spread along the real axis.
